

TRIM & MOLDINGS

These Small Additions Play a Big Role

As you plan the overall design for your space, it's important to factor trims and moldings into the budget. They're a must-have for presenting a cohesive, completed look that functions the way you need it to.

Trims and moldings come in coordinating or matching styles that will blend beautifully with your chosen Robbins hardwood flooring product. They hide gaps, joints and edges and create a smooth transition between hardwood and other flooring types.

Understand the Uses for Each Trim & Molding Option

Your project may only require some of these pieces. Here's where and how each is used to complete a hardwood flooring installation.

Threshold Molding (aka Baby Threshold)

1. Finishes the edge where flooring ends, especially in a doorway.
2. Eases the transition between different heights of flooring.

Flush Stair Nose

1. Protects edges of landings, steps and elevated floors.
2. Creates a smooth look by sitting level with the floor.

Overlap Stair Nose

1. Protects edges of landings, steps and elevated floors.
2. Has a slightly raised profile that overlaps the flooring surface.

Reducer Strip

1. Creates a slight slope to transition smoothly between different heights or types of flooring.
2. Divides rooms and can be used as a design element around fireplaces and doorways.

T-Molding

1. Transitions between two different hardwood floors or between two flooring types of the same height.
2. Covers expansion/contraction joints.

Quarter Round Molding

1. Hides open spaces where the flooring meets steps, baseboards and cabinets
